INDEX.

THAT.
of imports during five months, 638; staples, 638; with the interior, price of provisions, 636; extent of gold-producing country round, 633; rich crops of, irrigation unneeded, 639; earthquakes near, 641; state of education and religion in, 643, 614; annual floods of the Zambezi at, 644; cotton grown at, manure spread on, 645; medical resources of, 647; funeral at, 652; departure from, 654.
Then, the Egyptian, resembling the Bakwain God, 64.
Thermometer, heights of, the, portending rain, 160; heights at Unku, 167; heights of, in eastern Africa, 624.
Thief, sufferings from, 79.
Thorn-bearing plants of Africa, 345, 316.
Thracians, njefu eaten by, 664.
Thunder without lightning, 596.
Tintsu, the salt spring of, 159.
Tianyane, a new species of antelope, 209.
Tiger, the, India trap for, 138.
Tipped, a hammock, 375.
Tikannapeta, a quickly-fading African wild flower, 512.
Thapana, a prophet of the Makololo, 56, 57.
Tito, transgression, 552; various accidents accounted, 457.
Thomla, a dead mowana at, 162.
Thorny, fascinated by fire, 145; two varieties of Barrachia, 487.
Tobacco, plantations of, in Shinte's town, 298; leaves dried, pounded into-smalls, 318; height of, plants in Angola, 462.
Toddy palm-tree, 411; cocoa-nut palm, a substitute for yeast, 639.
Toofo, a hill seen from Zumbo, 580.
To-lo, the, see koodoo, 56.
Tole, a plant useful in curdling milk, 160.
Tombo, Ngama, volunteers the loan of a canoe, 575.
Tortoises, land, their habits, shells prized by native Africans, 136.
Tololo, the, told demanded at, 535.
Token, remains of a deserted Bakota, 534.
Trade in skins of the Bakalaha, 50; staples of the Portuguese with the Balonda, 239. See Commerce.
Traders dependent on missionaries, 33; English, offence given by, to the Boers, 39; Boerish, In forbidden goods, 36; slave, usual policy of, 181; good linguists the most successful, 191; native Africa, 559; half-caste, meeting with a party, of from Bihu, 359; native, bad system pursued with, 502.
Trap, the substratum of the Kuru-nut country, 112; fragments of the old schists in, accounted for, 474.
Travelling, privations of, in Africa, 42; diseases among preserving health in, 572; average day's march in, 615.
Trees destroyed by long-continued

TUSK.
imputation, 261; petrifed on the Chipungu, 572, 573; cause of, their scrubbiness near Tete, 625.
Trotcheamer, an instrument for measuring progress, 59 note.
Trogon, the, peculiar note of, 261.
Tuckba, estate and plantations of the sub-commandant at, 357, 388.
Trotter, Admiral, newspapers received from, 672.
Trough form of the centre of Africa, its geological structure explained, 474, 475.
Tsope, the spring-buck, 103.
Tsesche, the, its vanity of life, 267.
Tsetse, on the banks of the Tumanaka, 75; encountered by Dr. Livingston's party near the Matobe, 79; described, 80; animals to which its bite is fatal, effects of the bite, 81, 83; precautionary measures against, 83; on the Sandata, 174; ten cases lost by, 177; the Banyuti unable to rear domestic animals on account of, 212; latitude of their habitat on the Leembye, 214; Dr. Livingstone turned back by, 221; districts enclosing Linyanti, 227; connection of, with the elephant, 260; cause of Londo's freedom from, 327; Leada only of late years free from, 336; in early times probably infested Ienga Fanza's country, 332; found on the Kavalla, 464; near the Makondo, 487; between Na-neta and Sekesi, 499; insect preying on, 63; either bank of the Zambesi, eastwards, infested by, 507; patch passed by night, 515; on the banks of the Lekone, 527; night marches on account of, 534; herds slaughtered by Schimane on account of, 549; on the Chipongo, magnified drawing of, 571; return of, with larger game to the Zambesi, 575; former pasture grounds infested, 574; inest the country of the Bambiri, 606; the district of Tete free from, 630.
Tsi'pa, small African ocelot, 56.
Tuba, a wood, used as a substitute for coal, 80; mode of obtaining salt from, the, 270.
Tuan, the lynx, 50.
Tuba Mokoro, headman of Dr. Livingstone's Baroese boatmen, 533.
Tusks covering large districts of country, 111, 112; changing to limestone, 233; freshwater shells in, evidences of the ancient physiognomy of Africa, 527.
Turtles, water, good for food, 490.
Trucks, elephant's, Lechistotus' offer of, to Dr. Livingstone, 65; his offer of, as price of a gun, 75; Sekelotor's gift of, 159; destroyed by fire, 191; taken by Dr. Livingstone to exchange with the Portuguese, 236; given by Schele for "gun medicine," 288; various weights of, in Angola, 489; the heaviest, from Luva, 439; increase in size on approaching the equator, 561.

WASHINGTON.

Tzo, the, a branch of the Embarrab, 67.

Ue, the, a sand stream, 611; its sandstone bank, 616.
Ulva, birthplace of Dr. Livingstone's father, 1; conversion of the Roman Catholics of, 2.
Unguini, the, flows towards the centre of Africa, 527; passage of, geological structure of the country, 532.
Unicorn's Pass, the, scenery of, changed from old times, sketch of the landscape, 150.
Unku, the, verdurde of, 167.

Vaal River, the, noisy attrition of rocks in, 598.

Vardon, Major, his interest in African discovery, 46; experiment of, testing the virulence of tsetse-bites, 82; large horn brought to England by, 85 note; letter of, describing a battle between three lines and a buffalo, 129, 146; note of new species of the antelope named after, 356 note.

Vegetable diet, bad effects of an exclusive, 26.
Vegetation, differences of, in the same latitudes of Africa and Australia, 57.

Victoria Falls, arrival of the Matebele, 459; an obstacle to descending the Zambezi, 567; Dr. Livingstone resolves to visit, 512; a cavity of the scene, 519; detailed description of, 520, 521; fissure in the rock described, 521; sprey columns, breadth of the river, 522; accessible part of the fissure, period of its formation, 523; superstitions connected with, 523; Dr. Livingstone's garden above, 525.

Villages of the Baroze, built on mounds, 532.

Vinegar, an antidote to the Ngotuane poison, 113.

Vines, with tuberous root, recommended to the Cape farmers, 169; grape-bearing, unexpected discovery of, 169; varieties of wild, on the Zambezi, 616.

Vungwe or Munyange, the, rocky hills, watershed of the sand rivulets of East Africa, 610, 611.

Wader, the crook-beaked, of the Leembye, its manner of feeding, 253.

Waaggon-travelling in Africa, 94.

Wales, New South, fossil trees of, found also in Africa, 573.

Wallace, allusion to, 7.

Wallis, Dr., leaves quinine for Dr. Livingstone, 672.

War, the, a lemming in Dr. Livingstone's instructor in theology, 6.

Wars, the, slave-trade, or cattle-stealing, invariably the cause of, 473.

Washington, Captain, document given by, for publication, 665; information obtained from, on the
INDEX.

WATER.

navigation of the Zambesi, 670, 671 note.

Water, Bakalahari mode of drawing, jealous storing of, 51, 52; difficulty of obtaining in the desert, 55; list of animals able to subsist without, 56; animals found only in the neighbourhood of, 59; indications of, in old watercourses and fountains, 111; indispensable to serpents, 143; evidence of its importance in African eyes, 151; salt and bitter, of South Africa, 160; insect killing, 416; experiments showing the moisture to be drawn from the atmosphere, 417; pulsates for secure drawing of, in Angola, 465.

Water-plants of the Shire, 663.

Waterhoer, a Griqua chief, history of his administration, 105, 106.

Watershed, the, of South African rivers, 329; of the Zambezi and Nile, 476; of eastern sand rivers, 610, 611.

Wax, exported from the west coast of Africa, source of the, 255; a staple of trade, 344; its value, as a staple of commerce, unknown in East Africa, 614, 615.

Webb, Captain, supplies brought by, to the Bakwains, 125.

Weir, Balonda, of mats and reeds, 54.

Wells, description of, in the desert, 54; care requisite in digging, 55; artesian, probable success of, in Africa, 97; proposed as substitutes for the Boers' deep cuttings, 112; roofed, by the Balonda, 286.

Weitzel, Dr., remarks of, on grasses, 415.

Westwood, Mr., letter from, describing edible larvae, 164 note.

Wheat, grown in Angola, 379; grown at Pungo Andongo, 421; yielding an hundredfold at Tete, 439.

White men, Dr. Livingstone the first of, seen by the Balonda, 307.

Wilkinson, Sir Gardner, woodcuts from his work, 400.

Winds, easterly, the cause of little rain falling in South Africa, 95; hot electric, of the Kalahari desert, 123; north and south, of Africa, 323; west, followed by fever in Angola, 436, 437; effects of north, in Loula, 462; north-east, the harbinger of the rainy season, 516; bringing rain in different latitudes, 555.

Withcraft, cowardice in lion-hunting, from belief in, 11, 12; drought ascribed to, 22; premature burials from fear of, 129; ordeal to prove innocence of, in Angola, 434; chief dying by the ordeal for, 441.

ZAMBEZI.

case of, decided before Kawawa, 468; ordeal to prove innocence of, used in eastern Africa, 621.

Winter, varying severity of, in South Africa, 70; in Loula, 483; smoky tinge of, its probable cause, 498, 499.

Women, not compelled to hard labour by the Makololo, 189; high position of, among the Balonda, 292.

Woodruffe, Lieutenant, lost on the bar before Killimane, 672.

Worms, infesting wild animals, 136.

Worship, religious, inanity of savages to understand, 157; observance of, among the Bushmen, 165; disrespect of the Makololo for, 187; propriety of setting apart a place for, 185; increasing reverence of the Makololo for, 504.

Xavier, St. Francis, missionary armour of, 41.

Zabesha, a broad reach of the Chobe, 175; villages of observation on, 222.

Zaire, or Zerereze, name of the Kasaa, 457. See Congo.

Zambesi, or Lecambye, the tsetse on, preventing the domestication of cattle, 82; Sebituane's conquests on, 85, 86; conflict with the Matobele on, 88; the discovery of, by Dr. Livingstone and Mr. Oswell, 90, 91; peculiar ceremonies, system of instruction of Bechuanas and Cafrre tribes south of, 145, 149; names of, 208; project of making a path to the east coast by, the, 391; cruel religion of the countries north of, 431; branch of, rising near Matlanovo, 458; Dr. Livingstone's project of following it to Masko, 459; approach to, 472; its floods accounted for, 475-479; route to the east coast by, obstacles, 507; signification of the name, 519; dark hue of Batoka of, 533; a great dislocation of rocks, opening a bed for, 506; near its confluence with the Katfu, breadth of the river, the waters discoloured, its abundance of animal life, 573, 574; agricultural population on its banks, 576; piercing the upper lip, practised by the women, 577; Dr. Livingstone advised to cross to Tete, unable to borrow canoes, 589; terraced banks of, 599; ready hospitality of villagers on, 590; passage of, resolution to follow its course, 594; the country to the north of, the most fertile, 595; floods of, distinguished from its inundation, 602; probability of a continuous stream of foundation in old times, 655; the black rhinoceros scarce to the north of, 611; wild grape-vines on, 616; trial by ordeal of tribes on, 621; fertile islands, depopulated by the war, 636; its source unknown at Tete, 640; navigation of, fettered by rights of native chiefs, 642; its capabilities as a highway of commerce, 656, 657; laborious ascent of, to Tete, 655; navigable to its mouth, 665-669; projects for improvement of its navigation, 673; in certain months open to Tete, 674.

Zango, rest and refreshment at, 385.

Zangwe, the, flowing into the Zambesi, below Sennu, 663.

Zanzibar, Arabs from, trading in slaves, 92; Arabs from, entertained by Dr. Livingstone, 223; region to the east of Londa described by Arabs of, 476; route to the east coast by, 506.

Zbra, the, found always near water, 56; shot in the Balonda country, 270, 271; antipathy to, among the Africans, 535.

Zimikus, the hill, bare rocky hilltops seen from, 626.

Zingesi, the, a sand rivulet, vain attempt to ford, 598.

Zonga, the, Dr. Livingstone passed by, in 1542, 14; flocking of elands and ostriches to, in drought, 56; reached by Dr. Livingstone's party, 63; Dr. Livingstone's raft-making in, escape from alligators, 69; the banks of, described, 69, 71; fish of, 72; Dr. Livingstone reluctantly recrosses, 75; size of elephants on, 564.

Zulus, expelled from the Magliesberg, 30; of Natal, their honesty, 201. See Caffres.

Zomba, at, Dr. Livingstone learns his father's death, 37; Father Pedro of, a ruined village, at the confluence of the Zambesi and the Loangwa, 585; an admirable site for trade, 586; water communication in three directions, 587; old grey sandstone beginning at, 589; spoken of as still belonging to the Portuguese, 599; no game-law enforced above, 599; dolomite near, unremarked by the Portuguese, 629; breadth of its great coalfield, 638; the widest of, 639.

Zongo, a Zambesi islander, his presentment, his recommendation to Pangola, 589.

THE END.
LONDON:
PRINTED BY WILLIAM CLOWES AND SONS, STAMFORD STREET,
AND CHARING CROSS.
felt by the villagers in all public questions, and they furnished a proof that the possession of the means of education did not render them an unsafe portion of the population. They felt kindly towards each other, and much respected those of the neighbouring gentry who, like the late Lord Douglas, placed some confidence in their sense of honour. Through the kindness of that nobleman, the poorest among us could stroll at pleasure over the ancient domains of Bothwell, and other spots hallowed by the venerable associations of which our school-books and local traditions made us well aware; and few of us could view the dear memorials of the past without feeling that these carefully kept monuments were our own. The masses of the working people of Scotland have read history, and are no revolutionary levellers. They rejoice in the memories of "Wallace and Bruce and a’ the lave," who are still much revered as the former champions of freedom. And while foreigners imagine that we want the spirit only to overturn capitalists and aristocracy, we are content to respect our laws till we can change them, and hate those stupid revolutions which might sweep away time-honoured institutions, dear alike to rich and poor.

Having finished the medical curriculum and presented a thesis on a subject which required the use of the stethoscope for its diagnosis, I unwittingly procured for myself an examination rather more severe and prolonged than usual among examining bodies. The reason was, that between me and the examiners a slight difference of opinion existed as to whether this instrument could do what was asserted. The wiser plan would have been to have had no opinion of my own. However, I was admitted a Licentiate of Faculty of Physicians and Surgeons. It was with utmost delight I became a member of a profession which is pre-eminently devoted to practical benevolence, and which with unwearied energy pursues from age to age its endeavours to lessen human woe.

But though now qualified for my original plan, the opium war
was then raging, and it was deemed inexpedient for me to proceed to China. I had fondly hoped to have gained access to that then closed empire by means of the healing art; but there being no prospect of an early peace with the Chinese, and as another inviting field was opening out through the labours of Mr. Moffat, I was induced to turn my thoughts to Africa; and after a more extended course of theological training in England than I had enjoyed in Glasgow, I embarked for Africa in 1840, and, after a voyage of three months, reached Cape Town. Spending but a short time there, I started for the interior by going round to Algoa Bay, and soon proceeded inland to the mission station in the Bechuana country, called Kuruman, which is about seven hundred miles from Cape Town. This had been established, nearly thirty years before, by Messrs. Hamilton and Moffat, and may be considered the most southern point of the real missionary field on that side of the country. It is an interesting spot on many accounts. The mission-houses and church are built of stone. The gardens, irrigated by the Kuruman rivulet, are well stocked with fruit-trees and vines, and yield European vegetables and grain readily. The pleasantness of the place is enhanced by the contrast it presents to the surrounding scenery, and the fact that it owes all its beauty to the manual labour of the missionaries. Externally it presents a picture of civilised comfort to the adjacent tribes; and by its printing-press, worked by the original founders of the mission, and also by several younger men who have entered into their labours, the light of Christianity is gradually diffused in the surrounding region. This oasis became doubly interesting to me, from something like a practical exposition of the text, Mark x. 29; for after nearly four years of African life as a bachelor, Mr. Moffat having returned from a visit to England in 1843, I screwed up courage to put a question beneath one of the fruit-trees, which, I believe, is generally accompanied by a peculiar thrilling sensation in the bosom, and which those who have never felt it can no more explain than the blind man did who thought that scarlet colour was like the sound of a trumpet, and I became united in marriage to his eldest daughter, Mary, in 1844. For a man to say much about his wife would not only be distasteful to the public, but, as it is in this case, decidedly disagreeable to herself. Having been born
in the country, and being expert in household matters, she was always the best spoke in the wheel at home; and when, in order to save time, I took her with me on two occasions to Lake Ngami, and far beyond, she actually went farther, and endured more, than some who have written large books of travels. In process of time our solitude was cheered by three boys and a girl, and, I think it useful to mention that, we never had the least difficulty in teaching them to speak English. We made it a rule to speak together always in our own tongue, and a law that the children should address us in no other. It was surprising to observe how seldom we had to remind them of the law. They never attempted to address us in the native tongue, though they spoke both it and English perfectly. From our experience, the spectacle of a missionary's children speaking only the native language ought never to be seen. When they went on board ship they refused to say another word of the native language, and now have lost it entirely.

In consequence of droughts, which will be described in their proper place, we were mainly dependent for supplies of proper food on Kuruman, and were often indebted to the fruit-trees there and to Mrs. Moffat's kind foresight for the continuance of good health. It ought to be known that, when visitors arrive at most mission stations, the best of everything is provided for them freely; but having heard that some graceless fellows, who had been feasted gratuitously, went back to the colony, saying, "These missionaries live like fighting cocks," we never made any change in our fare for even our friends.

If the reader bears in mind that from 1840 to 1845 I was employed in preparatory labours and associated with other missionaries at Kuruman and Mabotsa; then from 1845 to 1849 continued to work at Chonuane and Kolobeng, aided only by Mrs. Livingstone and two native teachers; that in 1849 the journey to discover Lake Ngami was undertaken; and that in the following pages a sketch of our labours at Kolobeng is given, as well as an account of the journey to Lake Ngami, and finally the last great journey which occupied the years 1852-6 detailed,—he will have a clear idea of the arrangement of this book. Speaking generally, I have spent sixteen years of my
life, namely, from 1840 to 1856, in medical and missionary labours in Africa without cost to the inhabitants.

As to those literary qualifications which are acquired by habits of writing, and which are so important to an author, my African life has not only not been favourable to the growth of such accomplishments, but quite the reverse: it has made composition irksome and laborious. I think I would rather cross the African continent again than undertake to write another book. It is far easier to travel than to write about it. I intended on going to Africa to continue my studies; but as I could not brook the idea of simply entering into other men's labours made ready to my hands, I entailed on myself, in addition to teaching, manual labour in building and other handicraft work, which made me generally as much exhausted and unfit for study in the evenings as ever I had been when a cotton-spinner. The want of time for self-improvement was the only source of regret that I experienced during my African career. The reader remembering this will make allowances for the mere gropings for light of a student who has the vanity to think himself "not yet too old to learn." More precise information on several subjects has necessarily been omitted in a popular work like the present; but I hope to give such details to the scientific reader through some other channel.
